SUMMARY

Final-year Information Technology student with hands-on experience in Unity 3D and C#/OOP, having developed and shipped 2D and 3D casual games end-to-end. Experienced in implementing gameplay systems, enemy AI, physics interactions, and Object Pooling, with a strong focus on debugging and performance optimization using Unity Profiler. Adaptable and proactive in learning new technologies and applying them to practical projects, with a strong desire to collaborate with a team and contribute to building engaging casual games for a global audience..

SKILLS

- **Game Engine:** Unity 2D/3D, Animator, Physics, UGUI, Input System
- **Programming:** C#, Object-Oriented Programming, Data Structures
- **Performance & Architecture:** Object Pooling, Performance Optimization/Profiling, Singleton Pattern, Observer Pattern, Dirty Flag, ScriptableObject, State Pattern.
- **Tools:** Git/GitHub, Visual Studio, Unity Profiler

PROJECTS

Survival Top-Down 3D

Unity 6 | C# | 3D Hyper-Casual |  [Portfolio](#) |  [GitHub](#) |  [Play Game](#) |  [Trailer](#)

- **Architecture & FSM:** Built a modular FSM framework (IState, StateManager) to manage Player & Enemy AI states.
- **Performance:** Developed generic Object Pooling (BasePooling) for bullets, enemies, bombs, and VFX, achieving 0 B/frame GC allocation and stable 120+ FPS PC / 60 FPS Mobile.
- **Combat & Auto-Aim:** Implemented 3-projectile spread attacks, Charge ammo system, and 2-tier Auto-Aim with 90° priority, 360° fallback, and smooth rotation..
- **Enemy AI:** Developed distance-based Melee/Ranged AI, Animation Event hitboxes, and stacking Poison DoT with stack refresh logic..
- **Data-Driven & Input:** Used ScriptableObjects for combat stats, EXP, and skills; integrated New Input System for PC Keyboard/Mouse & Mobile Virtual Joystick.

Space Ship 2D

Unity 6 | C# | Solo Project |  [Portfolio](#) |  [GitHub](#) |  [Play Game](#) |  [Trailer](#)

- Shipped a complete 2D space shooter end-to-end: 3 playable stages, 3 unique boss encounters, full inventory, progression system.
- **Performance:** Eliminated per-frame GC allocations (0B/frame) via Object Pooling for bullets, enemies, and VFX, sustained ~143 FPS (~7ms/frame) verified with Unity Profiler.
- Built enemy AI with player-tracking, multi-phase attacks, and HP-based phase transitions (shield activates below 40% HP).
- Designed decoupled, reusable systems using Singleton, Observer Pattern, and ScriptableObject data, no direct cross-system dependencies
- Implemented asynchronous scene loading with a custom loading screen and progress bar.
- Integrated UI, audio, particle effects, and animation to strengthen game feel.

EDUCATION

- **University:** Ho Chi Minh City University of Industry and Trade - Information Technology
- **Expected Graduation:** December 2026
- **GPA:** 3.61 / 4.00

ACHIEVEMENTS

University Academic Scholarship

- Awarded for 3 consecutive semesters (2023–2025)
