SUMMARY

Third-year Information Technology student passionate about Unity game development. Independently built a complete 2D space shooter using Unity 6 and C#, implementing gameplay systems such as enemy AI, inventory, object pooling, and scene management. Eager to apply my technical skills, learn from experienced developers, and contribute to a professional game development team.

SKILLS

- **Programming:** C#, Object-Oriented Programming
- **Game Engine:** Unity 2D, Animator, Physics, UGUI
- **Tools:** Git/GitHub, Visual Studio, Unity Profiler
- **Concepts:** Object Pooling, Singleton Pattern, Observer Pattern, Dirty Flag, ScriptableObject

PROJECTS

Space Ship 2D

Unity 6 | C# | Solo Project |  [Portfolio](#) |  [GitHub](#) |  [Play Game](#) |  [Trailer](#)

- Designed and built a complete 2D space shooter from concept to finished build, featuring three playable stages and three unique boss encounters.
- Implemented an inventory system supporting collectible and support items tied into gameplay progression.
- Programmed enemy AI with player-tracking behavior, multi-phase attacks, and health-based phase transitions (shields activate below 40% HP).
- Improved runtime performance by implementing Object Pooling for bullets, enemies, and explosion effects, eliminating per-frame GC allocations (0B/frame) and achieving stable performance of ~143 FPS (~7 ms/frame) during Unity Profiler testing. Built reusable, decoupled gameplay systems using Singleton, Observer Pattern, and ScriptableObject-driven data.
- Implemented asynchronous scene loading with a custom loading screen and progress indicator.
- Integrated UI, audio, particle effects, and animations to strengthen game feel and player feedback.

EDUCATION

- **University:** Ho Chi Minh City University of Industry and Trade
- **Expected Graduation:** December 2026
- **GPA:** 3.60 / 4.00

ACHIEVEMENTS

University Academic Scholarship

- Awarded for three consecutive semesters (2023–2025)

LANGUAGES

- **Vietnamese:** Native
- **English:** TOEIC 650 (in progress)
